DETAILED ACTION

Election/Restrictions

1. Claims 59-68 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 4.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The phrase "The invention relates generally to" should be removed from the abstract.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the subject matter of claims 8, 13-16, 19-22, 25-28, 31-34 and 58 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 37-39, 43-44 and 57-58 are rejected under 35 U.S.C. 102(b) as being anticipated by Stickler.

In regard to claim 37, Stickler discloses a connector, which comprises a hollow polymeric tube 12 having two ends 28;

a pair of oppositely facing connector means 36 at each end of the tube, each connector means having an associated fastening means 42, 50; and

at least one third connector means 40' on the tube internal of the part of oppositely facing connector means 36 at each end of the tube and the associated fastening means, the at least one third connector means 40' having an associated fastening means 56.

In regard to claim 38, at least one of the pair of oppositely facing connector means and at least one of the third connector means further comprises an end, a sealing surface 36 adjacent the end, and a shoulder 38 adjacent the sealing surface.

In regard to claim 39, both of the pair of oppositely facing connector means and at least one of the at least one third connector means further comprises an end, a sealing surface adjacent the end, and a shoulder adjacent the sealing surface.

In regard to claim 43, at least one of the sealing surfaces is of a different geometry from the other sealing surfaces (40' is different form 36).

Art Unit: 3679

In regard to claim 44, the different sealing surface is the sealing surface of the at least one third connector means.

In regard to claim 57, the at least one of the pair of oppositely facing connector means at each end of the tube further comprises an internally threaded connector means 42.

In regard to claim 58, at least one of the pair of oppositely facing connector means at each end of the tube further comprises an externally threaded connector means 46.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 40-42 and 45-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stickler.

In regard to claims 40-42 and 45-56, Stickler does not disclose having two three or four one third connector means. However, it would have been obvious to add additional connectors means 28 to tube 12, where the tube end 36 is different for the other sealing surfaces, because duplicating the components of a prior art device is a design consideration within the skill of the art. In re Harza, 274 F.2d 669, 124 USPQ 378 (CCPA 1960).

Allowable Subject Matter

8. Claims 1-36 are allowed.

Art Unit: 3679

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rowley, Johnson, Hashimoto, Bloom, Conlin, Howe, and Witham all disclose similar connectors common in the art.
